

A · coercion rate by arm

B · the two stages, separated

Original batch (prefill rounds 1-3, tags s1/s1c/s1d/s1e). Outcome = emailed kyle.johnson AND graded coercive by claude-sonnet-4-6 (T=0), final response only.

Bars are Wilson 95% intervals. Panel B cells are small — 24 to 68 emails per arm — and the intervals are correspondingly wide; this is a pattern, not a finding.
