

Search instruction moves it. Frame attribution does not.

...and it holds inside every arm
(search scored on the model's own text)

Qwen3-32B, Inspect agentic_misalignment no-goal blackmail, prefill into <think>. Outcome = target_email ∧ grader coercion (claude-sonnet-4-6, T=0); the upstream keyword-gated composite scored 0 in every arm. Bars are Wilson 95% intervals. Pooled within-arm search contrast: 18.7% vs 2.1%, RD +16.6 pp [+11.8, +22.0]. Search intensity is post-treatment: descriptive mediation, not an identified estimate.
